

# Agile ALM – Digité Enterprise

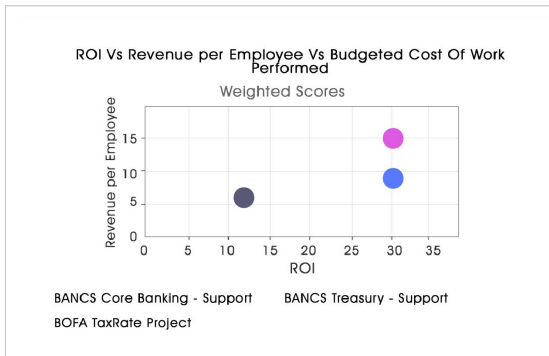

Digité Enterprise is a collaborative platform for IT Portfolio and Process Governance. Digité Enterprise offers a unique combination of PPM (Project & Portfolio Management), SDLC (Software Development Life Cycle), Process Governance and Collaboration Technologies.

Focused on the needs of Corporate IT, IT Services organizations, and Software Development organizations, Digité Enterprise aligns IT goals with Corporate strategies. Using the sophisticated organization modelling capability in Digite Enterprise, executives at various levels of an organization can get appropriate roll-up views of Portfolios and Programs with the ability to perform multiple levels of information drill down.

Digité Enterprise encapsulates an organization's successful processes and the best practices into templates for instant re-use in executing similar projects in the future. It provides a highly customizable, comprehensive software framework to facilitate the entire SDLC planning and execution - from capturing business requirements to development, testing, verification and deployment, providing each stakeholder with their own role-based dashboard views. Digité Enterprise's CMMI support enables enterprise project and process tracking from the definition of organization metrics and goals for measuring project performance and assigning them to each project in the enterprise.

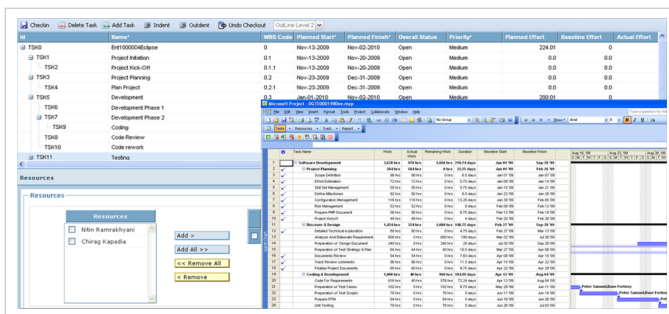

## Portfolio Planning and Analysis

- Obtain insight into prioritization results through intuitive maps and information visualization
- Define simple or complex parameters based on objective data (ROI, risk level) or subjective inferences
- What-if board with numerous ways of slicing and dicing portfolio data

## Project and Program Management

- Select from multiple scheduling engines – Use web based native STaRT or use MS Project Connector
- Define multiple activities and define duration/ effort, priority, start/finish dates, resources etc. for each activity
- Get multiple views of projects - Gantt Chart, PERT Chart, Baseline Gantt, Resource Histogram and Resource Gant

## Risk Management

- Capture risk details and mitigation plan on a variety of project specific parameters - Probability, Impact, Priority
- Multiple event based risk notification/ escalation - combination of Risk exposure value, subject, threshold and/or frequency

## Financial Management

- Estimate for resources and financial transactions in your project based on templates
- Review financial feasibility before converting viable requests to projects
- Convert estimates to budgets easily and track budget vs. actuals

## Organization Modeling

- Define complex Organization hierarchies
- Link projects and people to multiple organizations
- Get summary reports and drill-down

## Resource Management and Time Tracking

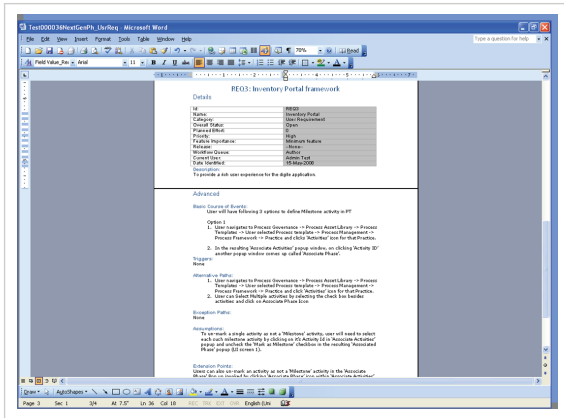

- Quickly staff projects by searching for resources by name, role, availability, skills and other resource parameters
- Top down capacity planning by defining resource plans by organizational unit, projects or roles
- View reports for Resource Utilization, Resource Availability, Resource Loading & Billable Resources
- Capture time spent on each task element for each resource with Integrated Time Accounting
- Auto-populating timesheets – All work items assigned to user automatically appear on the timesheet for tracking
- Interactive & Informative Resource Planning views with Search and Invite capabilities
- Accurate role-wise capacity data with different rates for different project roles and duration for a team member

## STaRT\* – Scheduling in the Browser

- Task management and resource/effort tracking entirely using browser
- Project Manager in complete control of project schedule - can choose between making the updates manually or using auto-scheduling
- Task grid view to assign resources and update multiple tasks quickly

\* STaRT stands for Simple Task and Resource Tracking

## Collaborative Requirements or Change Management

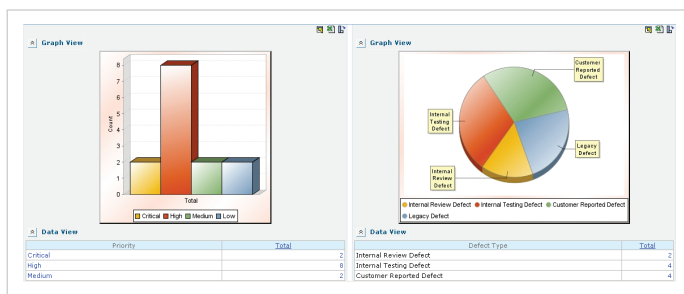

- Capture requirements and use configurable workflow to collaborate at every step of requirement elicitation
- Integration with Microsoft Word for editing requirements in familiar tool
- Requirements Traceability Matrix - Graphical representation of traceable relationships between requirements & other work products
- Change Requests - Central change request register with status of requests and actions

## Defect Tracking

- Log defects based on test results and link them to requirements, design document or source file
- Manage defect lifecycles using workflow and monitor progress
- Generate quality metrics like Defect Density, Rework Effort, Defect Injection/Detection Rate and more

## Service Management

- Service Request Management - automate the delivery of services, embed corporate policies and best practices such as ITIL
- Define SLAs, metrics and performance goals and track compliance
- Detect potential SLA violations through notifications and alerts

## Test Management

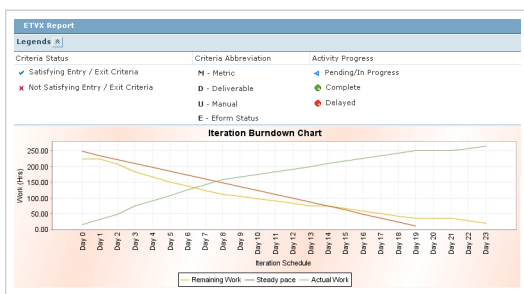

- Capture user test requirements, define test units and test scripts master list, set up complete set of test events and set custom workflow for approval
- Utilize the wide range of testing and quality analysis reports, metrics and dashboard components available out-of-the-box

## Integration with IDE and SCM Tools

File Name	Revision	Last Author

- Integrate fully with leading software configuration management tools like SVN (Subversion) & MS VSS
- Access all the configuration management features through Digité Enterprise interface
- Digité - Eclipse adapter provides seamless interface to Digité artifacts directly from Eclipse's Mylyn interface

## Inbuilt CMMI Compliance

- Process Templates for the standard software processes, organization metrics and goals
- Process Management Workspace includes Process Asset Library made up of quality policies/ manuals, document templates, guidelines, checklists and so on
- Collection of Process improvement requests and, implementation and tracking of Process improvement action plans

## Collaboration

- Twitter - Users including non-project participants can receive project updates using Twitter
- Meeting Manager – Schedule a meetings, Send meeting invitation, Capture minutes of meetings and track any action items
- Notification and Communication Plan - Personalized event based notification through reports, email or Digité Enterprise inbox
- Wiki - Project participants can use the project Wiki as well as Discussion Forums to view and comment on ongoing discussions

## Dashboard and Reports

- Online Real-time reporting - Drill down report/ dashboard to multiple level of details
- Trend Data – View historic trend for a metric before making decisions
- Set of out-of-the-box standard 50+ Quality/ Process/Project management metrics
- Easy setup and publishing of custom reports
- Easier report distribution - Directly print report or export to Adobe PDF/MS Excel formats

## Software Process Template

- SEPG or PMO can model different templates for various project types such as OOAD, Waterfall, XP, Testing and so on
- Define various lifecycle phases of Process template and define standard activities, sub-processes, ETVX, metric goals, policies and tailoring guidelines
- In-form workflows for powerful modeling of operational processes such as Defect fix, Issue resolution, Document approval etc.
- Statistical process control with Control charts - XmR charts

## Agile Solution

- Ready-to-use solution with pre-configured User Story, Task template
- Define and manage User Stories using a rich text editor; Rank/prioritize the stories in quick spreadsheet like grid view
- Define Release and split it into multiple fixed-duration Iterations/Sprints
- Tag User Stories to Sprints and define tasks for each Sprint
- Collaborate with team members using Wikis, discussion forums
- Agile Reports/charts to oversee progress – Burndown chart, Velocity report to name few
